

Velscope Oral Cancer Screening Detecting early stages of oral cancer

- *Oral cancer has 3 times as many victims as cervical cancer*
- *The incidence of oral cancer is growing.*
- *The biggest growth in oral cancer is among young non-smokers, and oral cancer is now linked to HPV.*
- *When oral cancer is discovered in early stages, the survival rate is very high but when discovered late (which is normally the case), the survival rate is very low.*
- *Health experts recommend that all adults receive annual oral cancer screenings*

We recommend this exam for all of our patients. The Velscope screening takes very little time, involves no pain or inconvenience, and is very affordable. The cost is \$25.00 and is unfortunately, at this time, still not covered by insurance.

Yes. I would like to have the Velscope exam done today.

No. I am not interested in the Velscope exam.
